

Data and the Web IS52027D online assessment, May 2020:

External examiner's comments have been considered as follows:

Q3. Options C and D, should say "is a software application" -> done

Q19 and Q41. Will it be possible in the system being used by students for online exams for them to look at other questions whilst answering a particular question? -> The descriptions of the questions are repeated in question 19 and 41 to avoid any reference to previous questions.

Q44.ii. "access" to "accesses" -> question 44 is removed from the online exam

ONLINE ASSESSMENT, PLEASE REFER TO THE LINK BELOW FOR ONLINE EXAM:

<https://learn.gold.ac.uk/course/view.php?id=12839#section-30>

The online exam is an adapted version of some of the moderated exam questions (Q1-Q43) in the form of multiple-choice questions (MCQs) and short-answer questions. All can be automatically graded.

There are two parts to this online assessment:

First part: 20 random multiple-choice questions (MCQs) out of 40 moderated and external examiner's approved MCQs. [40 marks]

Second part: 3 long questions, each 20 marks [total 60 marks]. Students should answer all three long questions.

I have divided MCQs in part one, to two parts of easier and harder questions to make sure all students answer same ratio of easy and hard questions. There are 30 questions in easier MCQ category, 15 to be randomly chosen and 10 harder MCQs, 5 to be randomly selected for students to answer. So, all students will be given 15 easier and 5 harder MCQs.

Mix of drop-down menu (MCQs) and short answers are used for the second part of the exam.

Question 21 has 3 variations with the same level of the difficulty, one to be randomly selected for each student.
